

Gruppe: Stine, Dano og Lucas

Digitale Arkiver og Metode uge-8 aflevering

Week 8 assignment is, inevitably, about Regular Expressions and OpenRefine

Upload a text file or a PDF with your answers/solutions to the problems below. Beware of making the submission legible and understandable to another reader; for example, consider using the "Save regex" functionality in regex101.com, which allows you to create a link out of your solution and share the link for easy use by your colleagues. Remember that you can elaborate solutions in groups but need to submit individually.

1. What regular expressions do you use to extract all the dates in this blurb: <http://bit.ly/regexexercise2> and to put them into the following format YYYY-MM-DD?

Bilag 1:

Her skriver vi en "regular expression" sekvens, der sorterer datoerne i YYYY-MM-DD: meta-karakterene `\d` gør at programmet fremviser tal, `.` matcher hvilken som helst tegn, `\s` matcher alle mellemrum, eller ny linje med "quantifiers"/udtrykket som `?` og `+` der matcher alle de karakterer, der fremkommer flere gange, i forskellige sekvenser.

Bilag 2:

I bilag 2 ses hvordan en Regular Expression kan skrives for at sortere datoer med dag, måned og år, i vilkårlig rækkefølge, og sorteres i rækkefølgen YYYY-MM-DD. Her benyttes udtrykket `\d{1,2}` for at matche datoer med et eller to cifre. Herefter repeteres dette for at matche både datoerne og månederne. Ligeledes kan udtrykket `\d{1,4}` benyttes til at matche årene. Som i det første bilag benyttes udtrykket `\s?`

REGULAR EXPRESSION

6 matches (78 steps, 1.1ms)

TEST STRING

Juan Ponce de León sights Florida for the first time, on 3.27.1513.
 Giovanni da Verrazzano explored the Atlantic coast of North America under French employ, on 4.17.1524.
 The Roanoke Colony was found deserted, on 8/15/1590.
 John Smith founded the Jamestown settlement, on 5/14, 1607.
 The Dutch laid claim to the territories of New Netherland, on 11.11.1614.
 The Massachusetts Bay Colony founded, on 3-4-1629

SUBSTITUTION

success (420µs)

\$3-\$1-\$2

Juan Ponce de León sights Florida for the first time, on 1513-3-27.
 Giovanni da Verrazzano explored the Atlantic coast of North America under French employ, on 1524-4-17.
 The Roanoke Colony was found deserted, on 1590-8-15.
 John Smith founded the Jamestown settlement, on 1607-5-14.
 The Dutch laid claim to the territories of New Netherland, on 1614-11-11.
 The Massachusetts Bay Colony founded, on 1629-3-4

REGULAR EXPRESSION

For at inddrage alle tegn der, i dette tilfælde, "binder" dag, måned og år sammen. Eksempelvis; xx,x - xxxx. Da der benyttes flere forskellige tegn i teksten, og i nogle tilfælde flere tegn efter hinanden, benyttes udtrykket `s?`, for at matche tegnene uanset hvor mange der findes i forlængelse af hinanden.

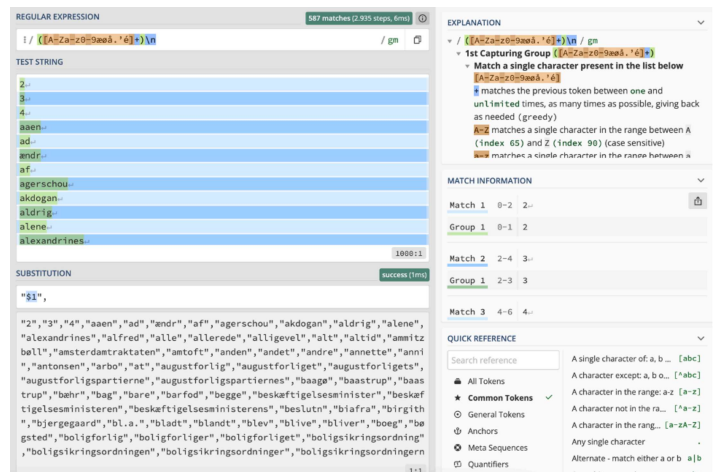

2. Write a regular expression to convert the stopwordlist (list of most frequent Danish words) from Voyant in <http://bit.ly/regexexercise3> into a neat stopwords list for R (which comprises "words" separated by commas, such as <http://bit.ly/regexexercise4>). Then take the stopwords list from R <http://bit.ly/regexexercise4> and convert it into a Voyant list (words on separate line without interpunction)

<https://regex101.com/r/IYw1NS/1>

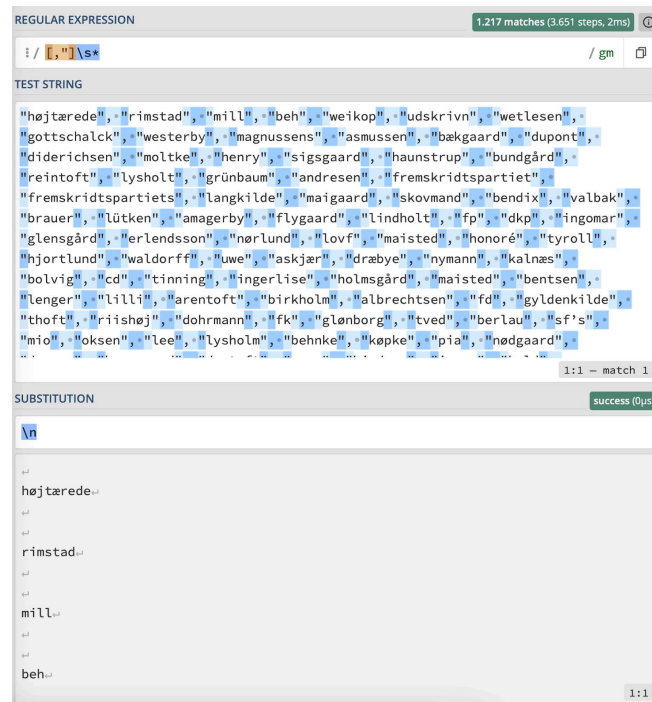

For først at kunne lave vores stopwordsliste om til en brødtekst, hvor ordene er adskilt af kommaer, benytter vi udtrykket `/([A-Za-z0-9æøå.´é]+)\n`

Tegnene i hæftteklammer `[A-Za-z0-9æøå.´é]` benyttes for at isolere alle tegn, både versaler og almindelige bogstaver, tal og de tegn der er særligt brugt i det danske alfabet; `æøå`. Herudover benyttes `.´é` for at adskille specialtegn, der også benyttes i den originale stopwordsliste.

Herefter bruges et `+` for at koden kan matche alle tegnene selvom de står i vilkårlig rækkefølge og repeteres så mange gange det kan lade sig gøre. Dette får koden til at indfange alle ord i teksten såsom: alle, aaen, ændr, eller ord der begynder med versaler; Amtoft og Bové. Ydermere matcher koden alle tal og specialtegn. Til slut benyttes `\n` for at inddrage alle linjeskift.

For at konvertere Stopwordlisten fra Voyant til R, skriver vi en 'Regular Expression' som fjerner citationstegn og kommaer, så det kan blive registreret i Voyant: '['']' er definere vi hvad vi vil have fjernede og så har vi '\s' som fjerner eventuelle mellemrum og så '*' som forstærker forudgående udtryk '\s'.

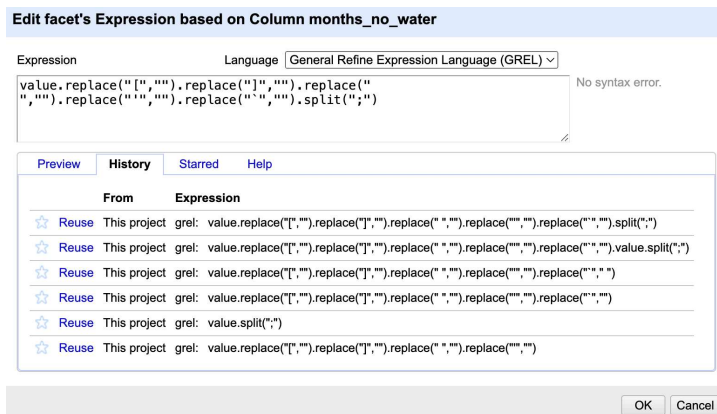

3. Does OpenRefine alter the raw data during sorting and filtering

Nej, OpenRefine bevarer det rå data under sortering og filtrering. Det ændrer dem ikke, men man skal være opmærksom på at programmet registrerer data som text; således at datoer og eventuelle tegn som ikke er text, bliver til text.

4. Fix the [interviews dataset](#) in OpenRefine enough to answer this question: "Which two months are reported as the most water-deprived/dryest by the interviewed farmer households?"

Gennem OpenRefine GREL expression kan vi dokumentere, at oktober er den tørreste måned i året (se bilag 4).

Dette har vi fundet frem til ved at importere Safi-filen til OpenRefine, finde kolonnen "months no water", facet → textfacet → change. Dette er for at sortere vores valgte

værdier (her tekst) efter tekst og ikke tal eller tidslinje. Dette gør vi for at finde frem til hvilken måned der fremgår flest gange i datasættet. Herefter kan vi benytte `value.replace` til at fjerne uønskede tegn og herefter `value.split` til at opdele de forskellige ord; eksempelvis Oct separeret fra Sept.

Month	Count
Oct	74
Sept	70
Nov	51
NULL	45
Aug	33
Dec	11
Jan	2
July	2
Apr	1
June	1
May	1

5. Real-Data Challenge: What are the 10 most frequent occupations "erhverv" among unmarried men or women of 20-30 years in [1801 Aarhus](#) census dataset? (hint: first select either men or women to shrink the dataset to a manageable size, then filter by age, and then use merging to cut the `erhverv` variation ruthlessly.)

Vi har indsat filen "1801 Aarhus census dataset" i OpenRefine. Vi har sørget for kun at inkludere ugifte mænd i alderen 20-30 år. Dette er gjort ved at oprette en "text facet" for derefter at trykke "include" på de valgte kriterier. Derefter har vi brugt funktionen "cluster" til at sortere side-erhverv og flere kategorier af samme erhverv fra. Til sidst har vi lagt kategorier sammen for at skabe færre professioner. Dermed kom vi frem til følgende resultat:

Se link:

<http://127.0.0.1:3333/project?project=2695267720374>

Occupation	Count
Soldat	553
Gaardbeboer	278
Husmand	110
Daglejer	71
Karl	63
Svend	61
væver	30
Tjener	28
Skræder	19
Matros	18
